

EUROPEAN TECHNOLOGY SUMMIT

Jim Downing
CTO
Metail

Jim is CTO at Metail, a UK-based startup that creates products and tech to help people online understand how clothes will look and fit. Metail's tech team research, develop and combine technologies from machine learning, computer vision, physical modelling, graphics, data science, web and mobile tech and devops to create products and services to help people engage with fashion more fully, and buy clothes with more confidence.

After graduating with a Masters in Engineering from the University of Cambridge, he has worked in roles and sectors spanning from consulting on financial services application performance to architecting academic software to working on information standards development. He joined Metail from the University of Cambridge where he ran a portfolio of Chemistry Informatics R&D projects, including the Microsoft OREChem project.
